

# Sample Meta-Analysis

## Contents

<b>1</b>	<b>Possible Layout</b>	<b>1</b>
1.1	Effect on depression . . . . .	1
1.2	Effect on Anxiety . . . . .	2
1.3	Effect on negative thoughts . . . . .	3
1.4	Investigating heterogeneity . . . . .	4
1.5	Investigating publication bias . . . . .	5
<b>2</b>	<b>Graphing Swatches: Some sample styles</b>	<b>5</b>

## 1 Possible Layout

This shows a possible layout for the results

### 1.1 Effect on depression

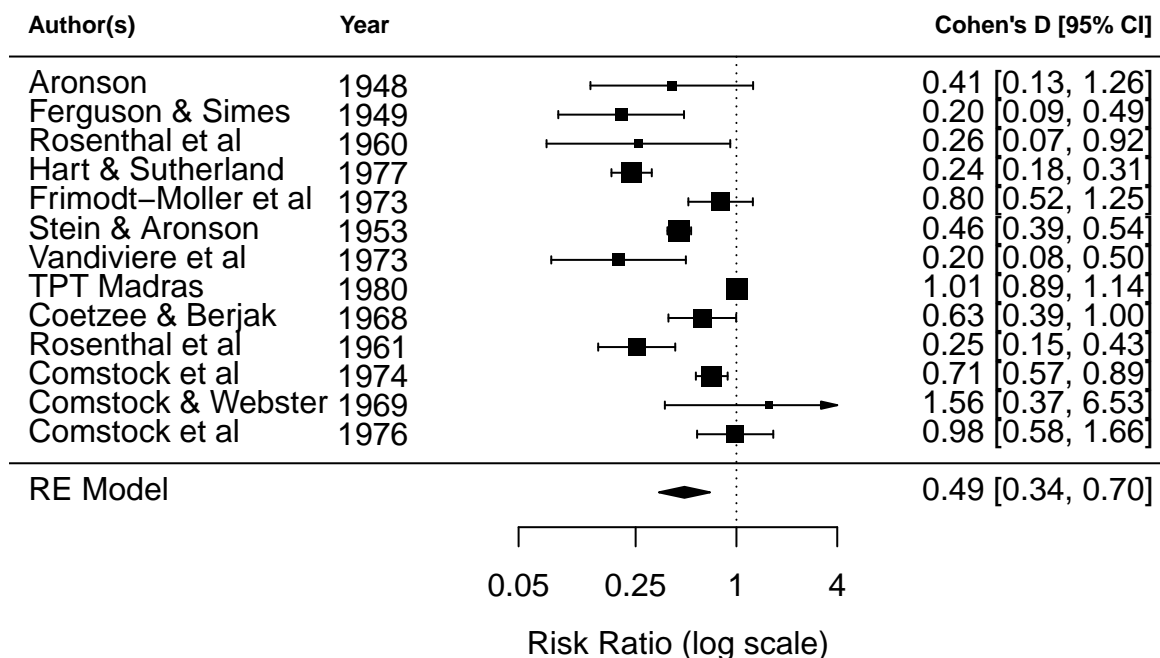

Figure 1: Depression SMD across Treatment Groups

Some text about depression...

1.2 Effect on Anxiety

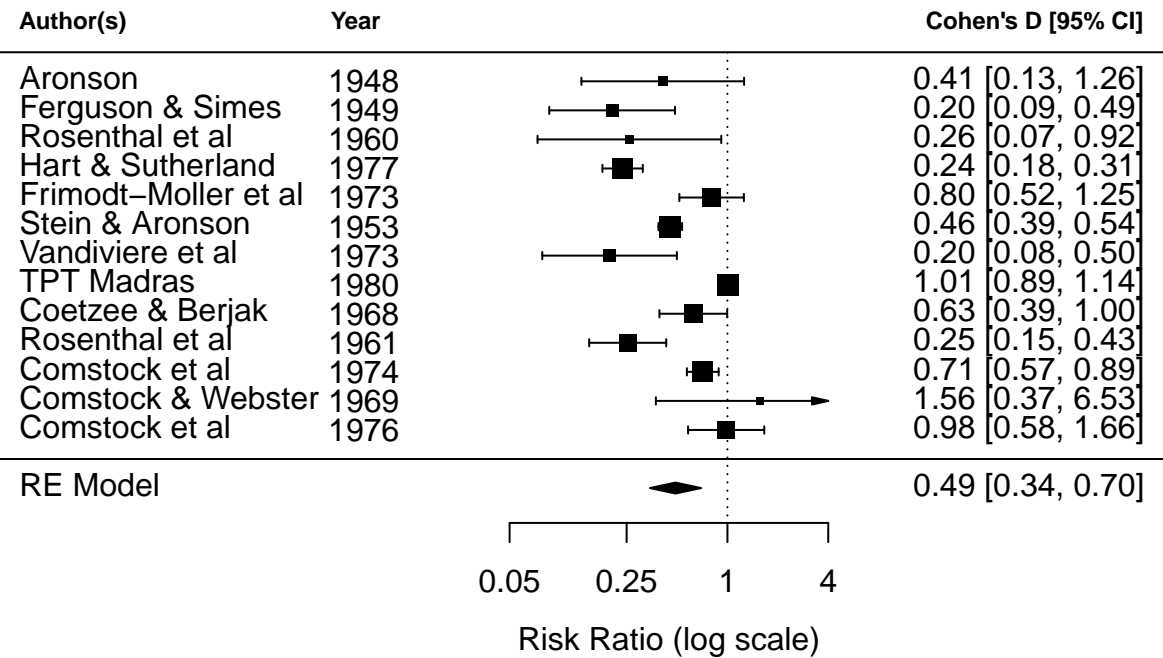

Figure 2: Anxiety SMD across Treatment Groups

Some text about anxiety...

### 1.3 Effect on negative thoughts

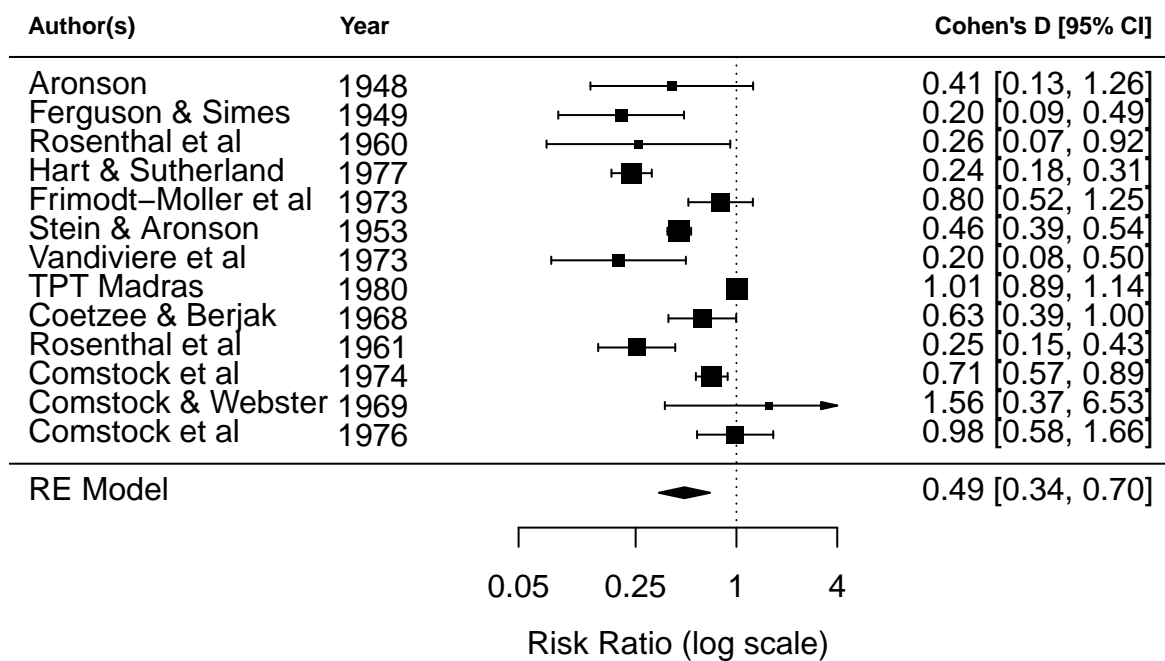

Figure 3: Negative Thoughts SMD across Treatment Groups

Some text about negative thoughts...

## 1.4 Investigating heterogeneity

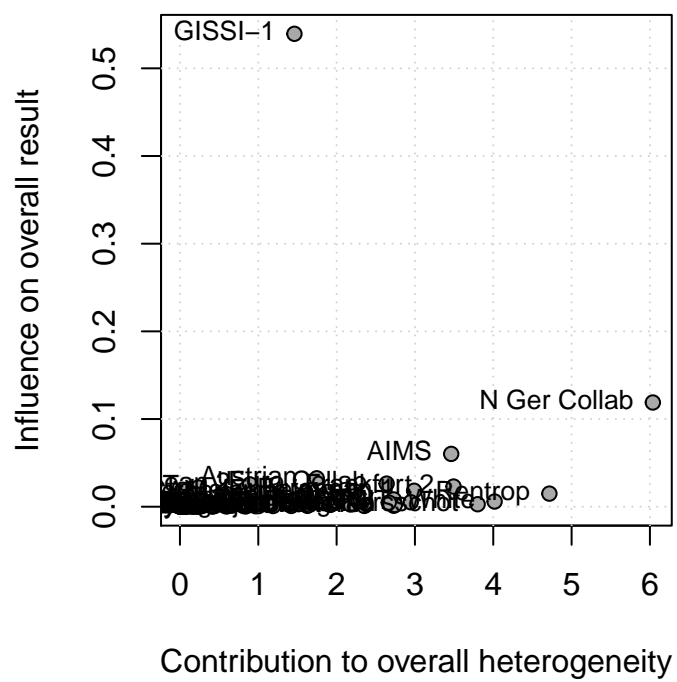

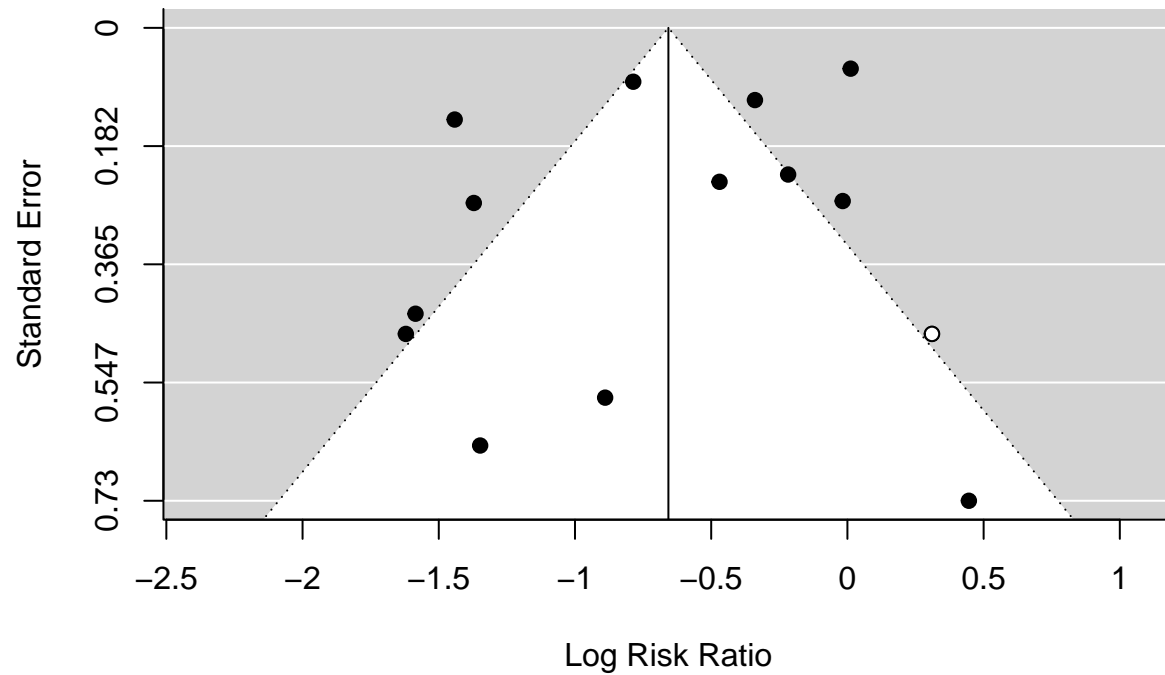

Figure 4: Baujat Plot

## 1.5 Investigating publication bias

Text about study asymmetry and trim/fill stats etc.

## 2 Graphing Swatches: Some sample styles

There are many possibilities when it comes to plotting styles. These are only three of limitless possible styles. We can also manipulate the parameters to change position, colour, labels and anything else for any of the below styles.

Style 1 can be used to display more statistics including the overall significance of the effect size plus any heterogeneity results.

Style 2 and 3 are simpler with less information which can then be quoted in figure caption or text.

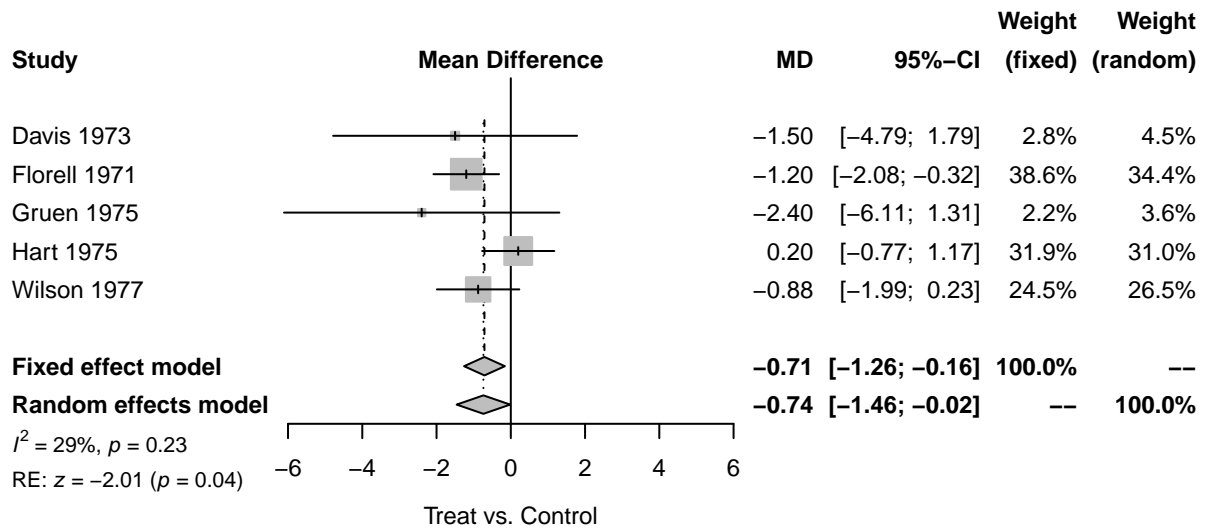

Figure 5: Style 1

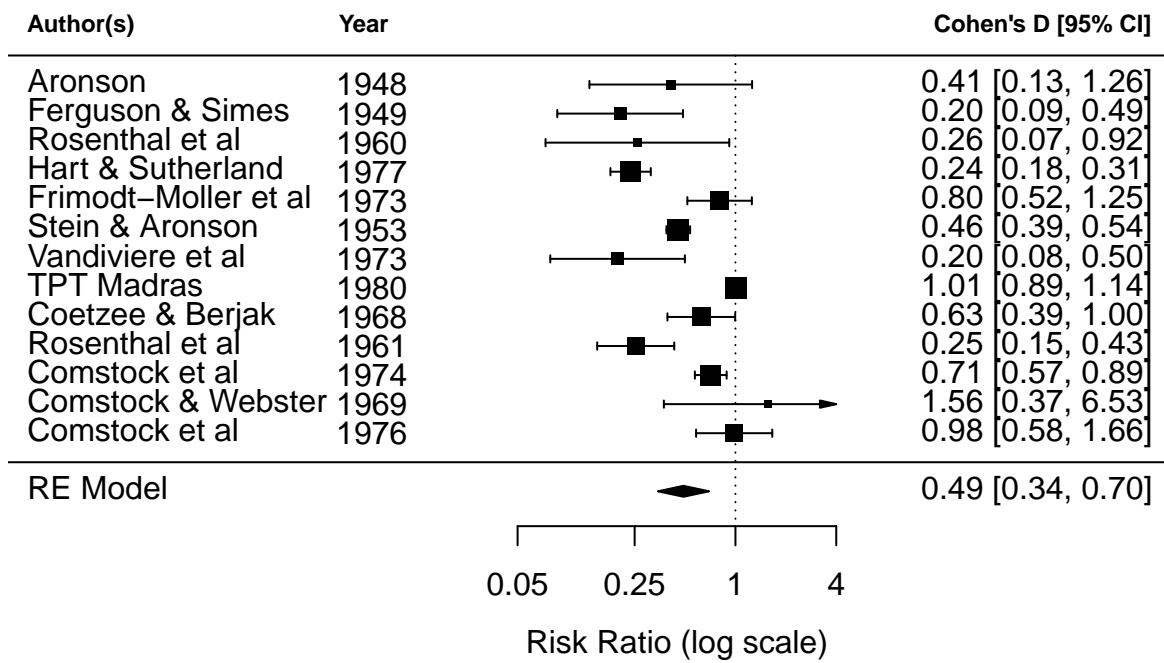

Figure 6: Style 2

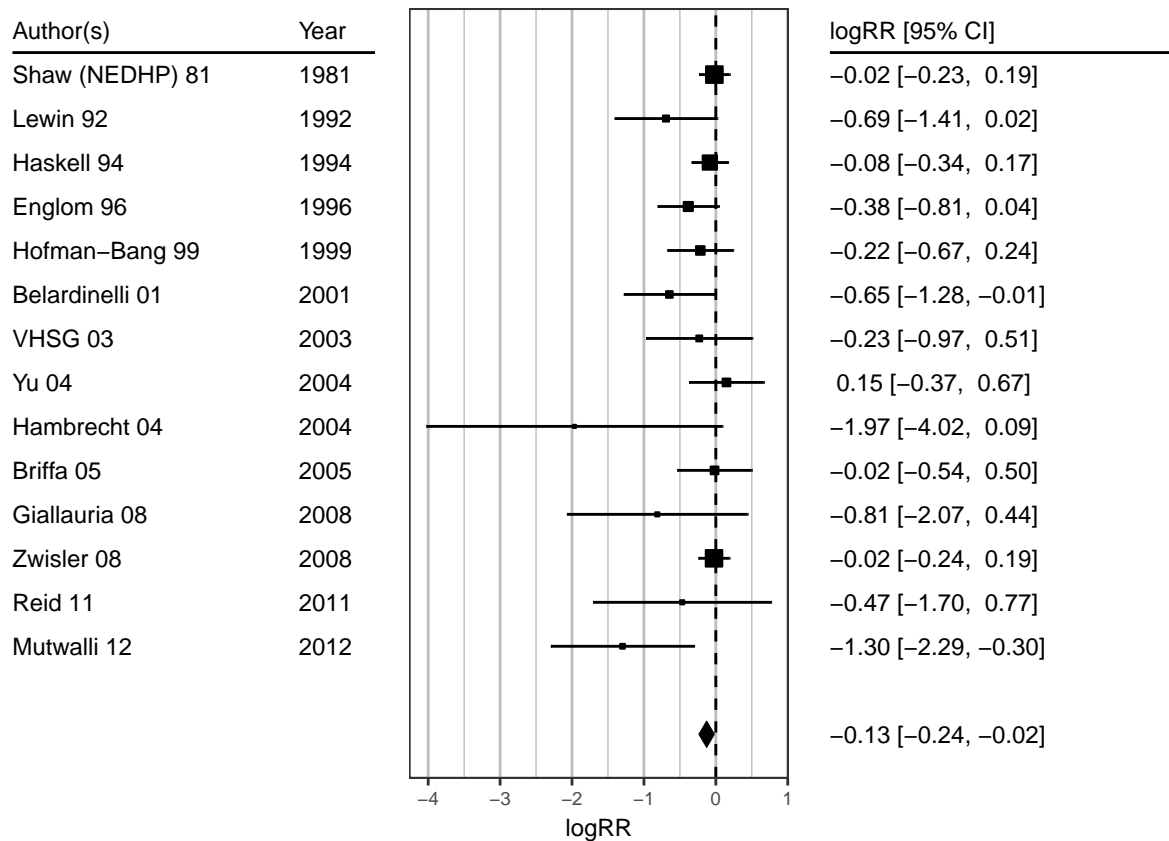

Figure 7: Style 3
